ABOUT ME

Informatics undergraduate student with experience as an Algorithms and Programming Teaching Assistant, specializing in **Artificial Intelligence**, **Backend Development**, and **Software Engineering**. Experienced in mentoring 40+ students, developing AI-based solutions, and implementing machine learning workflows through academic, industry-based, and scholarship programs. Skilled in **Python programming**, algorithmic problem-solving, **machine learning development**, and backend technologies. Passionate about building reliable software solutions while continuously expanding knowledge in AI engineering, cloud computing, and modern software development practices.

EDUCATION

University of Jember

S1 - Informatika; GPA: 3.86/4.00

August 2024 - Present

TECHNICAL SKILLS

- **Programming:** Python, C++, Javascript, Golang, PHP
- **Backend:** Node JS, Laravel, FastAPI, REST API, PostgreSQL
- **AI:** TensorFlow, Keras, Scikit-Learn, Pandas, NumPy, Computer Vision, Deep Learning
- **Cloud:** AWS, Google Cloud Platform, Microsoft Azure, Microsoft Fabric
- **Tools:** Git, GitHub, Visual Studio Code, Google Colab, Roboflow, Hugging Face

EXPERIENCE

AWS Cloud Practitioner Trainee

Orbit Future Academy

June 2026 - Present

- Selected for AWS re/Start Batch 15, a 7-week intensive cloud computing program by Orbit Future Academy and Amazon Web Services (AWS), covering cloud fundamentals, Linux, networking, databases, security, and cloud operations.
- Developed foundational AWS infrastructure skills and prepared for AWS Certified Cloud Practitioner (CCP) certification to support scalable backend and cloud-based solutions.

AI Engineer Cohort Coding Camp powered by DBS Foundation 2026

Dicoding Indonesia & DBS Foundation

February 2026 - Present

- Completed structured AI Engineering training covering Artificial Intelligence, Machine Learning, Deep Learning, Neural Networks, and Computer Vision through industry-based learning projects.
- Led a 6-member multidisciplinary capstone team consisting of AI Engineers, Data Scientists, and Full-Stack Developers to develop NutriScan MBG, an AI-powered food analysis system using U-Net segmentation and MobileNetV2 classification.

Algorithms and Programming Teaching Assistant

Software Engineering Laboratory

August 2025 - June 2026

- Served as an outsourced Teaching Assistant across two academic semesters, mentoring 40+ Informatics students through weekly programming laboratories and technical assistance sessions.
- Delivered programming and algorithm materials covering Python fundamentals, data structures, sorting, searching, hashing, pathfinding, shortest path algorithms, and dynamic programming.
- Guided students in final projects through debugging assistance, algorithm selection, implementation

strategies, and software development best practices.

Azure AI Engineer Trainee - Microsoft Elevate Training Center
Microsoft

October 2025 - June 2026

- Selected for Microsoft Elevate Training Center (METC) 2025-2026, focusing on Generative AI, data science workflows, Microsoft Azure, and Microsoft Fabric ecosystem.
- Strengthened AI development fundamentals through Python programming, data processing, Machine Learning modules, and preparation for AI-102: Microsoft Certified Azure AI Engineer Associate certification.

Machine Learning Engineer Trainee - IDCamp
IDCamp Indosat Ooredoo Hutchison

September 2025 - January 2026

- Selected for an intensive AI Engineering scholarship program and engineered an end-to-end machine learning pipeline using 2,500+ financial records with Pandas, NumPy, and Scikit-Learn.
- Developed customer segmentation and prediction models using K-Means, Decision Tree, and Random Forest, including feature engineering, PCA visualization, model evaluation, hyperparameter tuning, and model serialization.

PROJECTS EXPERIENCE

NutriScan MBG AI-Powered Web Platform for Food Detection and Nutrition Analysis using Computer Vision GitHub Repo	June 2026
CITECH Web-Based Registration Management System for Carnival Technology Web Design Competition by UKM LAOS GitHub Repo	June 2026
Suara MAWA Mobile Application for Student Aspiration Management and Reporting System GitHub Repo	June 2026
KOPDES Merah Putih Web Application with CFG-Based Testing, White Box Testing, and Black Box Testing Implementation GitHub Repo	June 2026
ASISTENKU Web Application for Laboratory Assistant Recruitment Management System GitHub Repo	Jan 2026
FLOFA Educational Game-Based Learning Application for Indonesian Flora and Fauna Recognition with Music Gamification GitHub Repo	Jan 2026

ACHIEVEMENTS

Bank Indonesia Scholarship Awardee Bank Indonesia Jember	April 2026
• Selected as a scholarship recipient based on academic achievement, leadership potential, and active contribution in student development activities.	
Juara Google Cloud Platform - Three Tier Recognition Google Indonesia	February 2026
• Achieved Three Tier recognition by completing Google Cloud learning paths covering fundamental cloud computing concepts and Google Cloud Platform services.	

2nd Place Winner - Informatics Competitive Programming Competition

Himpunan Mahasiswa Informatika

October 2025

- Awarded 2nd place in a competitive programming competition focused on algorithmic problem-solving, programming logic, and computational thinking.

CERTIFICATIONS

Membangun Proyek Deep Learning Tingkat Mahir Certificate Link Dicoding Indonesia	June 2026
Belajar Penerapan Data Science dengan Microsoft Fabric Certificate Link Dicoding Indonesia	June 2026
Belajar Back-End Pemula dengan JavaScript Certificate Link Dicoding Indonesia	February 2026
Use Machine Learning APIs on Google Cloud Certificate Link Google	January 2026
Build Serverless Applications with Cloud Run Functions Certificate Link Google	January 2026
Python for Data Science, AI & Development Certificate Link Coursera & IBM	February 2025
Other Certificates (Certificate Link)
